Coolant Level Sensor Repair

If the coolant level drops below a specific level, that completes the circuit and tells the PCM (powertrain control module) to set this code. When the PCM detects improper voltage or resistance within the engine coolant level sensor/switch circuit, code P2556 will be set and the check engine or low coolant / overheating light may be illuminated.

Why the Coolant Level Warning Light Is On, and What to Do

The coolant sensor is an electronic piece that measures the level of coolant in the radiator. This sensor measures the level of coolant inside the radiator when it is cool; as warm or hot radiator fluid will expand as it heats. When the sensor works properly, it will illuminate on the dashboard or trigger a check engine code to be displayed.
