## **What are the functional groups in dopamine - Answers**

Functional Groups, in the field of organic chemistry, are the substituent atoms or groups of atoms that are attached to specific molecules. These moieties (the part of the molecule which can be found in many other molecules as well) are responsible for the chemical reactions that the molecule they are attached to participate in.

## Functional groups answer key - O A aldehyde I O ketone H B ...

The Arrhenius definition of acid and base is limited to aqueous (that is, water) solutions. Although this is useful because water is a common solvent, it is limited to the relationship between the  $H^+$  ion and the  $OH^-$  ion. What would be useful is a more general definition that would be more applicable to other chemical reactions and, importantly, independent of  $H_2O$ .
