What Is Infrared? | Live Science

Infrared definition, the part of the invisible spectrum that is contiguous to the red end of the visible spectrum and that comprises electromagnetic radiation of wavelengths from 800 nm to 1 mm.

Amazon.com: infrared

Infrared waves, or infrared light, are part of the electromagnetic spectrum. People encounter Infrared waves every day; the human eye cannot see it, but humans can detect it as heat. A remote control uses light waves just beyond the visible spectrum of light—infrared light waves—to change channels on your TV.

Infrared | Definition of Infrared at Dictionary.com

Infrared heating has many advantages over conventional heating. Infrared heating technology helps to join the parts securely together without creating particles in the insides of the tubes.

Infrared

Infrared radiation (IR), sometimes called infrared light, is electromagnetic radiation (EMR) with wavelengths longer than those of visible light. It is therefore generally invisible to the human eye, although IR at wavelengths up to 1050 nanometers (nm)s from specially pulsed lasers can be seen by humans under certain conditions.

Infrared - Wikipedia

in·fra·red | \ ,in-frə-'red, -(,)frä-, -fə- \ Definition of infrared 1 : situated outside the visible spectrum at its red end — used of radiation having a wavelength between about 700 nanometers and 1 millimeter
