A complex number is a number that can be expressed in the form a + bi, where a and b are real numbers, and i is a solution of the equation $x^2 = −1$.Because no real number satisfies this equation, i is called an imaginary number.For the complex number a + bi, a is called the real part, and b is called the imaginary part.Despite the historical nomenclature "imaginary", complex numbers are ...

Introduction. One of the best ways I use to learn machine learning is by benchmarking myself against the best data scientists in competitions. It gives you a lot of insight into how you perform against the best on a level playing field. Initially, I used to believe that machine learning is going to be all about algorithms – know which one to apply when and you will come on the top.
