Pathological Demand Avoidance Syndrome: Some thoughts prompted by a proposed new diagnosis February 2016 – Pathological Demand Avoidance Syndrome (PDA) is thought by some to be an emerging syndrome. Its central feature is “an obsessive avoidance of the ordinary demands of everyday life” (Newson et al. 1993).

Pathological Demand Avoidance – AUTISTIC ASPERGERS

Pathological (or extreme) demand avoidance is a term sometimes applied to complex behaviours in children within—or beyond—autism spectrum disorder. The use of pathological demand avoidance as a diagnosis has, at times, led to altered referral practice and misunderstandings between professionals and the families of patients.

Pathological demand avoidance - Wikipedia

Pathological Demand Avoidance is a behavior profile seen in people with autism. A person with this trait refuses to follow demands that can be considered part of daily life such as going to school, eating dinner, or going to bed. This uncooperativeness is said to be based on anxiety and the need for control.
