Proximity Fuzes: Theory and Techniques.  
It has long been recognised that the efficacy of explosive projectiles would be greatly enhanced if these could be equipped with fuzes which would be actuated by the proximity to a target. For example, an anti-aircraft projectile which would automatically

A proximity fuze is a fuze that detonates an explosive device automatically when the distance to the target becomes smaller than a predetermined value. Proximity fuzes are designed for targets such as planes, missiles, ships at sea, and ground forces. They provide a more sophisticated trigger mechanism than the common contact fuze or timed fuze. It is estimated that it increases the lethality ...

In the fall of 1941, the Sylvania  
Company was brought into the tube  
program and it contributed greatly  
towards the development of improved  
tubes. By January 1942, a test  
conducted at Dahlgren gave slightly  
better than 50 per cent successful firing,  
and which was considered to be  
adequate to bring a manufacturer in the

Abstract. The exact calculation of height of burst has always been a challenge in the design of proximity fuzes. Radio frequency-based sensors can be designed for this purpose but the size and bandwidth of the antenna increases the design complexity; hence, miniaturization of the patch antenna using barium hexaferrite (BaFe<sub>12</sub>O<sub>19</sub>) as substrate material is proposed in this paper.
