The Moore method is a deductive manner of instruction used in advanced mathematics courses. It is named after Robert Lee Moore, a famous topologist who first used a stronger version of the method at the University of Pennsylvania when he began teaching there in 1911. The way the course is conducted varies from instructor to instructor, but the content of the course is usually presented in whole or in part by the students themselves. Instead of using a textbook, the students are given a list of d

They used the Moore algorithm to determine shortest paths and assigned all traffic to shortest paths. That is called all or nothing assignment because either all of the traffic from i to j moves along a route or it does not. The all-or-nothing or shortest path assignment is not trivial from a technical-computational view.
