Early Boats and Horses The first mode of transportation was created in the effort to traverse water: boats. Those who colonized Australia roughly 60,000–40,000 years ago have been credited as the first people to cross the sea, though there is some evidence that seafaring trips were carried out as far as 900,000 years ago.

Water Transport: Origins & Early Evolution - James Hornell ...

The History of Water Transportation. The history of transportation on water goes back thousands of years. Because water is the one thing that mankind needs to survive, civilizations have always been settled near and around water. Historically, societies have always located near water, due partly to the fact that water enables more efficient travel compared to going over land.

History of transport - Wikipedia

Transport on water. Ships and boats are as old as the desire to travel over and across water, and to fish. Boats are smaller than ships. They can be powered by people, animals or engines. There are different ways of propelling ships and boats. Some are moved forward (or propelled) by rowing with oars or paddles and steered with a setting pole.
